

AQUARIS

NFT STAKING GAME

AQS LIMITED

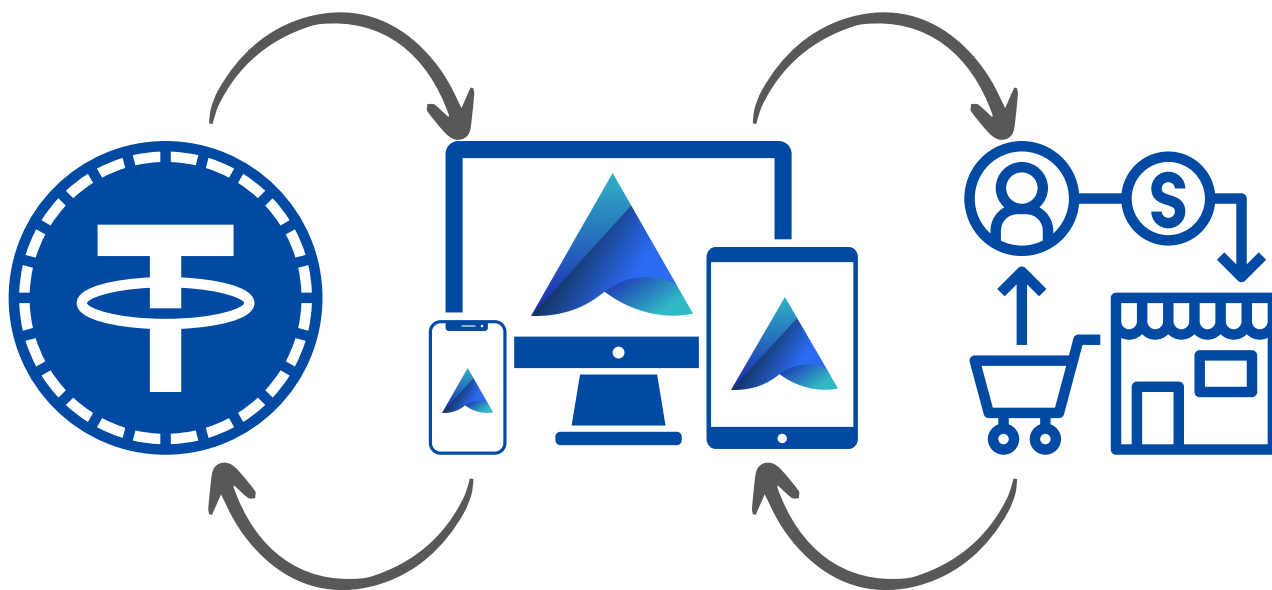

STAKING ON A NEW LEVEL

The first NFT staking program based on real profitable business - trading operations and business development and growth. AQUARIUS NFT staking platform is a sensitive and flexible solution.

WHAT IS AQUARIS NFT STAKING?

Aquaris NFT staking is a unique program that allows you to stake your USDT or BUSD directly to trading operations with fish products outside the crypto market. It means that the situation in the crypto market does not influence the AQUARIS NFT staking pool. All working processes with the staked fund occur between real companies and are covering with trading insurance.

WHY NFT ?

NFT is a unique instrument that brings a significant usage operations value.

Transparency in operations. Easy to check where is your NFT, its price, and its rewards.

Freedom in action. NTF on your wallet. You can transfer NFT between wallets or send (sell) it to another holder. You can return NFT to AQUARIS and take your funds back.

WHY STANDARD BUSINESS NEEDS AQUARIS NFT

To be a successful player in the market, whether crypto or standard trading operations, companies need a great value of funds. Banks can solve that problem, but they have their limits, risks, and difficulties like credit line limitations and loan interest depending on the floating interest rate of Euribor, and the main thing is TIME. All bank operation takes too much time. AQUARIS NFT brings speed and the possibility of getting a fast loan. In turn, AQUARIS provides the NFT with real money and goods value. It turns out to be a WIN-WIN DEAL.

WHERE MY FUNDS ARE WORKING

All funds from the AQUARIS NFT STAKING pool go directly into food industry trading operations. The first and primary sector is the Fish product market, and companies working with that deal are close partners of AQUARIS and have significant experience and many closed sales.

STEP BY STEP PROCESS

- AQUARIS staking pool working on NFT.

- The collection name is FISH CONTAINER.

- Inside the Fish container, there are NFT fishes.

- Each container contains 2000 fish.

- One fish price is 100 USDT (BUSD).

STEP BY STEP PROCESS

Connect your Metamask wallet to the AQUARIS platform.

You should select a collection - fish container, choose how much fish (NFT) you want to buy, and purchase them.

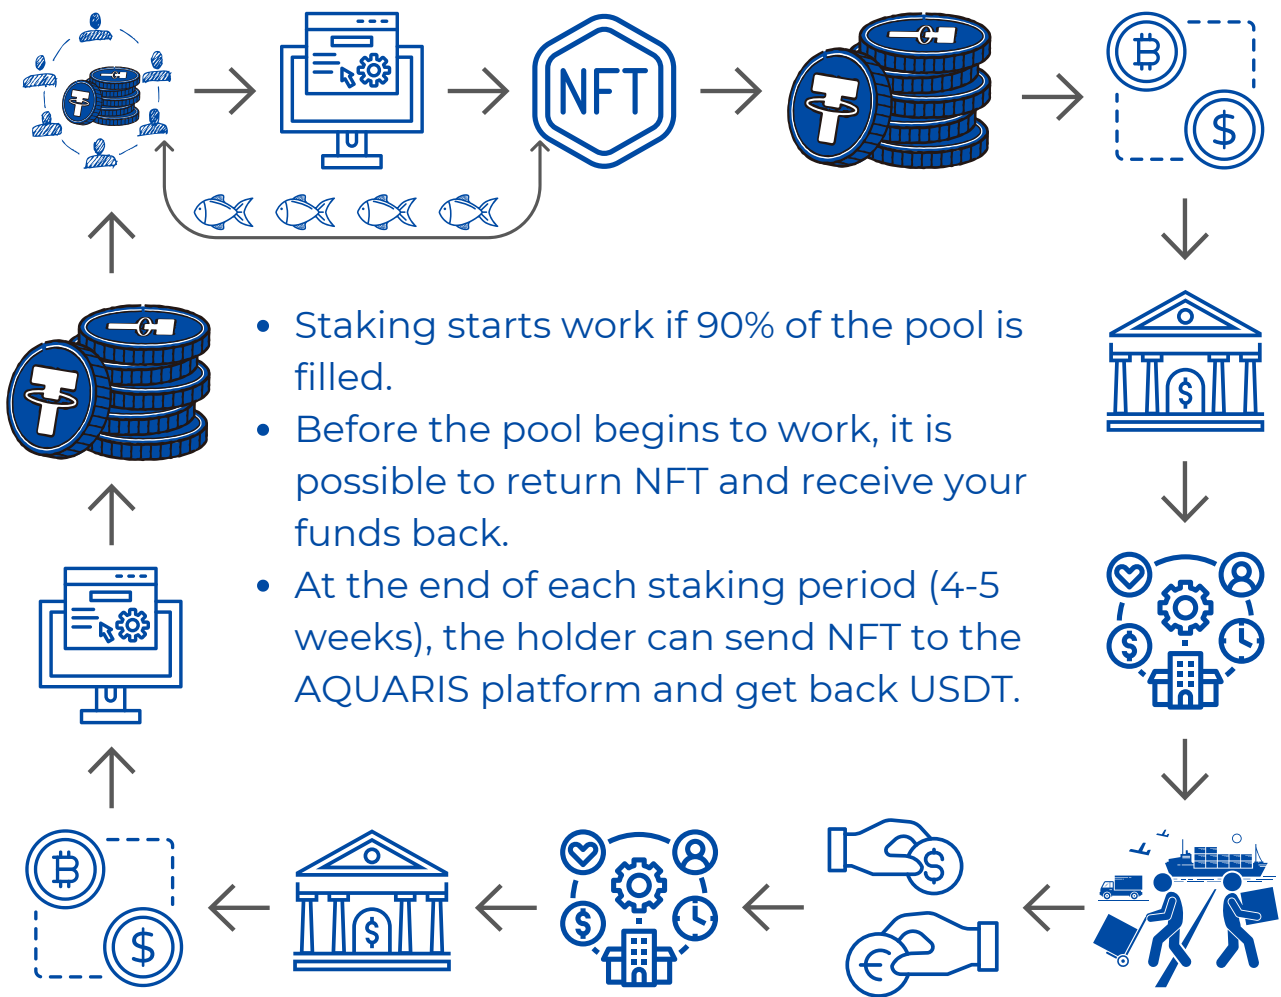

Hold your NFT in your wallet and wait for the reward.

You can transfer or sell NFT to another wallet. Staking % will go directly to the NFT holder wallet.

STEP BY STEP PROCESS

INSTRUCTION

Before starting, you should have on your wallet USDT. Our first staking NFT pools are working on the BEP20 network, the most secure and stable Binance-based blockchain.

- Connect your Metamask wallet to the AQUARIS platform.
- Sign the transaction to confirm your wallet.
- Select how many NFT tokens you want to buy.
- Press the buy button and sign the transaction to verify your purchase.
- Hold NFT in your wallet.
- Staking reward will arrive in the NFT holder wallet every 4-5 weeks. Staking rewards are not connected to the wallet address, and staking is related directly to AQUARIS NFT tokens. AQUARIS platform tracking the Binance blockchain network and seeing on what wallet NFT is located.

The staking reward period is 4-5 weeks, depending on the food market situation and money logistics. Staking percent depends on how much AQUARIS NFT you are holding. (Staking rewards amount you can find in table). Before each reward transaction AQUARIS platform checks on what wallet NFT tokens are located and the token amount. Holders can transfer NFT tokens between wallets or sell them to other holders. AQUARIS does not consider how many NFT tokens were bought and will only check the amount on the wallet at the reward transfer date.

OBLIGATIONS ON BOTH PARTIES

All your transactions are safe.

Firstly: work between AQUARIS and trading companies or manufactories is backed by contracts that impose obligations on both parties. AQUARIS lends to a particular trade deal or company, and the company, in turn, sends funds and undertakes to repay the loan with a profit within the specified period.

Secondly: all trading operations with fish products are covered by insurance.
